### **Status of Case**

In the judgment rendered 11/30/06, the examiner was specifically directed to reconsider "the prior art" in light of the revised claim construction imposed by the BPAI. (Decision, page 8). The examiner has done so; prosecution is hereby reopened.

### **Anticipation Rejection**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 45, 46 and 48-51 are rejected under 35 U.S.C. 102(b) as being anticipated by Hildreth (USP 5,091,101).

Patentee discloses a matrix (an article of clothing) comprising over 50% by weight water-insoluble polymer (the fabric), a water-soluble polymer (the detergent, which preferably is a condensation product of an aliphatic alcohol with ethylene oxide, i.e., a polyethyleneoxide (column 4, lines 13 and 14), and a water-leachable colorant (a blood stain: see column 6, lines 18 and 19) that leaches from the matrix when the matrix is exposed to water (washed) to provide a change in color (disappearance of the blood stain). The detergent also comprises an antimicrobial agent (short chain fatty acid, e.g., caprylic) whose depletion would "correspond with" that of the blood stain (removal of

both by washing).

### **Obviousness Rejection**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1614

Claims 47 and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hildreth (USP 5,091,101) in view of Derwent Abstract 1988-231797.

The primary reference is discussed supra and differs from the instant claims insofar as it does not specify the material from which its fabrics are made. It is well-known, however, to make clothes from synthetic fibers such as polystyrenes, as illustrated by the secondary reference.

### **Technological Background Material**

USP 4,404,040 is cited to demonstrate what is well-known in the art, namely that short chain fatty acids, e.g., caprylic, are antimicrobial agents.
